Step by step instructions for adding SIC / NAICS codes to your iUpdate account:

Please note that iUpdate requires you to verify your personal identity. This is to protect you and your business from fraud. D&B does not store the provided/confirmed personal information anywhere—in fact, after you are validated, that information disappears. It is “invisible” third party information, and follows the same process as some government and banking validations.

If you are already using Government iUpdate:

Current accounts who wish to add/change the SIC & NAICS code will need to call 866-794-1577 and request to be put on the commercial iUpdate user platform. This is an easy switch that the D&B rep can do and will change your account to the commercial site which allows for SIC/NAICS updates.

If you are a new user to iUpdate:

1. Please go to the link: https://iupdate.dnb.com

2. When you log into iUpdate for the first time, you will need to input your email address which will show this screen;
Please make sure you click “NO” on this screen, otherwise you will be directed to the Government iUpdate screen which does not have the features you are requesting.

3. On page 3, under History and Operations, you have the option (see below) to add the SIC and NAICS code.

4. Please click on “Add New SIC”. Once the SIC code is entered, the corresponding NAICS code will automatically populate.

This will now add the requested codes to your iUpdate account.
